Double Locking Wall Boxes

Ideal for use in any location, particularly when a standard cabinet is not available, these wall boxes will provide security for fibre patching fields. It has two separate doors that can be locked independently providing separate access to the fibre termination and patching areas. The locks are unique so each area can be restricted to authorised personnel only as required. With cable entry knockouts and patch cord exits at top and bottom of the enclosure, it can be mounted either way up for maximum flexibility.

The wall boxes can be supplied with SC duplex, LC quad, ST or FC style adapters. They can be configured for Singlemode or Multimode applications and are available fully loaded, partially loaded or unloaded as required. They are supplied complete with 1 x PG11 gland and 4 x Kurly Loks for cable management.
